## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 11 is rejected under 35 U.S.C. 103(a) as being unpatentable over De Somone (6,175,619) in view of Su et al(6,463,414) and further in view of Swartz(6,445,694)

With regards to claims 11, DeSimone teaches a method comprising: receiving a message from a first of said chat participants requesting the establishment of a voice call between ones of said chat participants (col. 4 lines 31-38), said message including information identifying method of payment for said voice call(col. 3 lines 30-33), sending a message to said first chat participant providing voice call session information and at least one authorization code(col. 5 lines 40-47), directing bridging means to bridge said setup voice links(col. 3 lines 33-37). What DeSimone fails to teach is (1) receiving a message from a second chat participant requesting participation in said voice call and presenting said voice call session

information and an authorization code, said voice call session information and authorization code being supplied to said second chat participant in a message in said chat session (this is because in DeSimone the first caller provides the telephone number of the second caller. However providing the session information and code to the call broker is a design alternation and hence obvious as a matter of design choice), (2) requesting call setup means to setup voice call links to each of a plurality of voice participants comprising at least said first and second chat participants, at least one of said setup voice call links being a VOIP link. In DeSimone the telephone call is setup over a PSTN and not a data network. In Su a voice chat is setup using VOIP links. It would have been obvious to combine Su with DeSimone for the purpose initiating voice chat over the internet. The motivation being to avoid toll charges. DeSimone teaches wherein said data network text chat session is an internet chat session(Fig. 1@100 internet) to which at least said first and second chat participants are connected through internet links(col. 3 lines 58-61). Desimone does not specifically disclose that the internet links originate at telephone subscriber lines, each of said internet links being identified by a current IP address(in Desimone, what is not disclosed is whether internet access is direct or

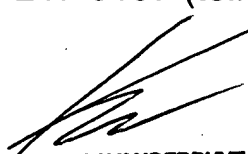

dialup). Swartz discloses internet access via a dialup connect and ISP.(Fig. 1). In dialup internet access an IP address is assigned to each link. It would have been obvious to one of ordinary skill in the art to combine Swartz with DeSimone for the purpose of VOIP voice chat session from a customers premise. The motivation being access to the internet via a telephone line.

***Allowable Subject Matter***

Claims 12-22 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
